

18.9 L Water bottle storage and handling instruction

1 CAP ON NOT GOOD With the cap on, heat causes pressure build-up inside the bottle, which can lead to deformation or damage.	2 CAP VALVE PRESSED IN BETTER Pressing the cap valve in allows some pressure to release, reducing the risk caused by heat.	3 CAP REMOVED BETTER Removing the cap allows air to circulate and prevents pressure build-up. Still avoid direct sun exposure.	4 IN CLOSED STORAGE BEST Store bottles in a closed area away from direct sunlight and high temperatures for best quality and safety.
BEST PRACTICE: Always store your 18.9 L bottles in a cool, closed area and avoid direct sun exposure. Illustrations created with the assistance of Artificial Intelligence (AI).			

Keep Your Bottle Happy!

A happy bottle lasts longer, looks better, and performs better.

Your 18.9 L bottle is designed for many uses. By protecting it from excessive heat and direct sunlight, you help extend its service life and keep it in the best possible condition.

😊 Make your bottle happy:

- ☀️ Avoid prolonged exposure to direct sunlight and high temperatures.
- If the bottle must remain outdoors in hot weather:
 - Press the cap valve to relieve internal pressure.
 - If appropriate, remove the cap to allow pressure equalization.

🏠 The happiest bottle is stored indoors in a cool, dry, shaded location away from direct sunlight.

Why does it matter?

Keeping your bottle "happy" helps:

- ✓ Extend the bottle's usable life
- ✓ Maintain its appearance
- ✓ Reduce stress caused by heat and pressure
- ✓ Keep the bottle in better condition for repeated use
- ✓ Support safe and reliable operation
